

Atturra ePlanning Integration

Connecting NSW councils to the NSW Planning Portal

A dedicated integration solution that's seamless, scalable and compliant.

What is Atturra ePlanning Integration

Atturra's ePlanning Integration communicates with the NSW Planning Portal via the secure APIs which DPIE has made available to councils and integrates with TechnologyOne, Civica and Infor Pathway ERP solutions to provide updates on the Development Application (DA) process.

Traditionally submitted to the applicant's local council with standard application forms, supporting technical reports and plans; the process of submitting a DA can now be fully automated, with applicants able to submit digital assets via the NSW Planning Portal.

APIs Supported

- Development Application
- Complying Development Certificate Service
- Certificate Registration Service
- Post-Consent Certificate Service
- Section 10.7 Planning Service
- Section 68 Service

How it works

Atturra has collaborated with vendors to **interface directly into the council ERP systems** and to facilitate the required workflows between council and NSW Planning Portal to take applications **from pre-lodgement through to determination**.

Using a detailed event handling and notification framework to ensure delivery of bi-directional communications and alerting on any outages, the atturra ePlanning Platform ensures that both applicants and councils are able to **streamline the Development Applications process** and turn around applications with increased accuracy and speed.

The Atturra ePlanning Integration advantage

Delivered as a **managed service**

Scalable for LGAs of all sizes

Can be deployed either on-prem or **on cloud**

Built on award-winning **Boomi platform**

Our team constantly updates the integration in step with the NSW Planning Portal and the ERP vendor development schedules.

“Atturra’s ePlanning Integration is a great example of a solution that leverages the strength of TechnologyOne’s API Compliance Connector to build a custom SaaS offering. The ePlanning Integration adapts to the changing NSW Planning Portal capabilities to automate the processes both to and from the Portal to TechnologyOne’s Property and Rating. This automated API integration ensures fast and accurate carriage of data from applicants to councils for our clients.”
